Village Egg Bank in Egg Currency (VEBEC) Project

<http://www.nestedsavings.org/village-egg-bank-project>

Background

- Despite sizeable humanitarian and development investments, the persistent complex challenges and recurrent adversity in vulnerable communities in LMICs denote a major a resilience gap
- To break these negative cycles requires learning from adaptive capacities of communities to develop new contextualized solutions that transcend business as usual
- Why HEIs? LMIC HEIs are uniquely placed to drive local resilience agendas: They are near the communities; are locally respected; research and innovation is their mission; Yet LMIC HEIs have insufficient presence in the development space
- We share a case-study of how African HEIs contributed to increasing development research and innovation through the RAN

RAN: Who are we?

- RAN, one of 7 development labs under the HESN USAID, convenes a consortium of 28 Universities in 16 African countries to advance resilience-based research and innovations
- Organized around 4 regional Resilience Innovation Labs (RILabs); with strong knowledge/technology-sharing partnerships with US-Based institutions (Purdue, Notre Dame, Stanford, Chicago, Tulane, The George Washington etc.)

Objectives of RAN

- **Objective (1)** Design a resilience analysis framework for Sub-Saharan African researchers
- **Objective (2)** Strengthen resilience of communities through research and innovations
- **Objective (3)** Enhance resilience-related knowledge generation and sharing

Step 1: Articulating a Resilience Framework

- **Purpose:** To facilitate a deeper understanding of resilience factors and intervention entry-points

- **Theory of Change:** *“The resilience of people and systems in Africa will be strengthened by leveraging knowledge, scholarship and creativity in HEIs to incubate, test, and scale innovations that target capabilities and reduce vulnerabilities identified by evidenced-based approaches”*

Step 2: Defining: Resilience of whom and to what ?

- **Of whom?** RAN believes that to increase resilience should be grounded in understanding the affected communities and what makes them thrive in recurrent adversity
 - We selected 1-4 Sentinel Communities per region to explore the resilience issues
- **To what?** Through comprehensive desk reviews, 6 regionalized resilience themes were identified:
 - **Eastern Africa**
 - Adverse climate events
 - Effects of chronic conflict
 - **West Africa**
 - Effects of rapid urbanization in vulnerable communities
 - **Southern Africa**
 - Food and income insecurity in communities affected by chronic diseases
 - **Horn of Africa**
 - Effects of drought
 - Effects of chronic displacement

Step 3: Conducting formative micro-resilience studies

- Locally-led deep-dive exploratory research:
 - FGDs and KIIs in the selected communities
 - Systems analysis workshops with stakeholders
 - Policy reference groups
- 6 questions:
 - *What main shocks and stresses affect you?*
 - *What are the causes/underlying causes?*
 - *What are the effects/Secondary effects?*
 - *What makes you vulnerable?*
 - *How have you adapted?*
 - *What makes you happy/fulfilled?*

Community engagement, Ga-Dikgale, Limpopo, South Africa

FGD, Uganda

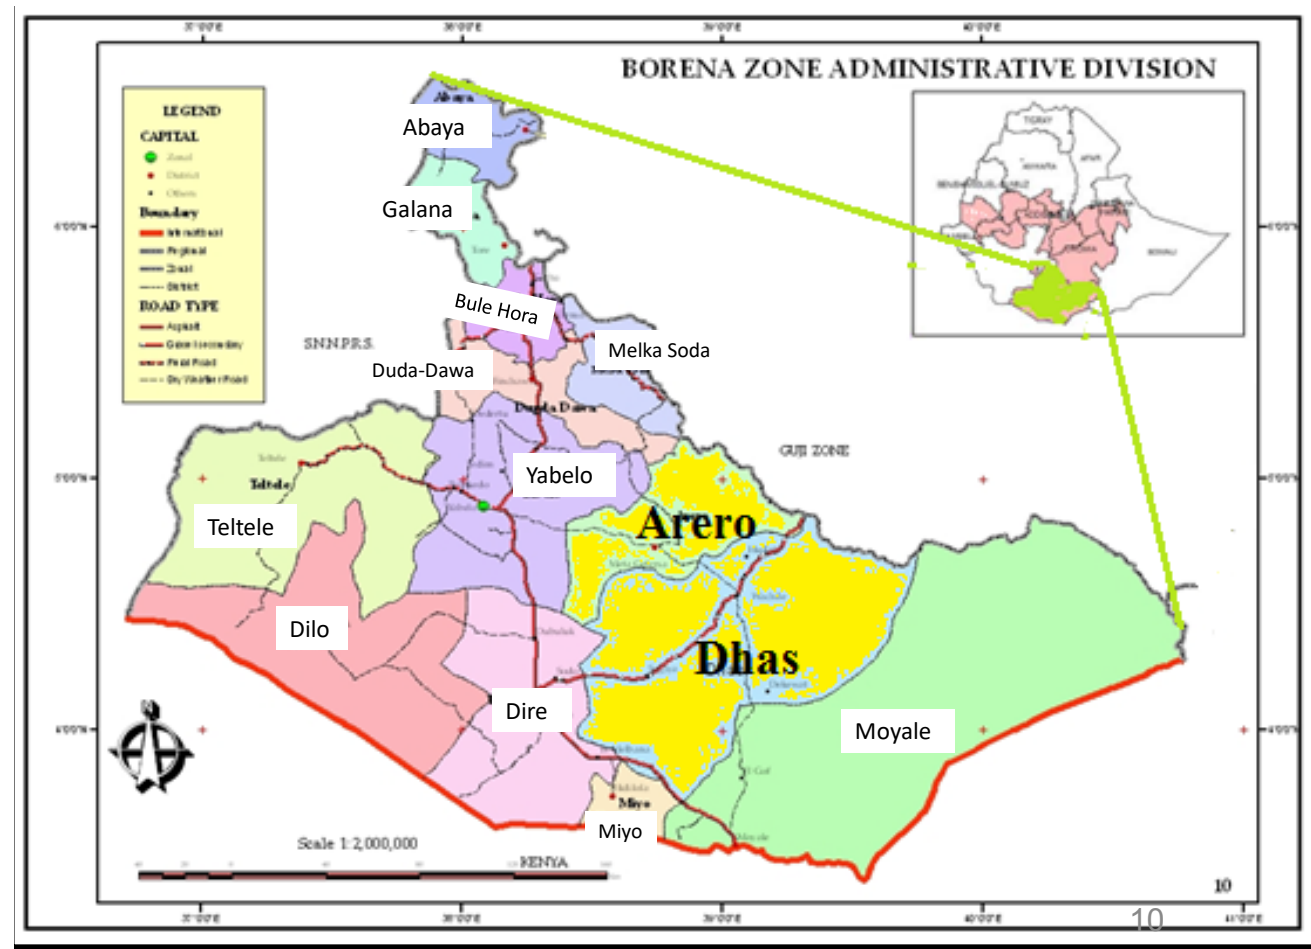

Step 4: Developing resilience indicators and conducting surveys

- The dimensions identified in the qualitative assessments were translated into quantitative indicators and tools
- 13 Community surveys enabled 1) structural models to show relationships and pivots; 2) development of measurement indices for resilience factors
- 4 Deliberative Polls enabled a democratic understanding of communities' informed opinions on key resilience policies

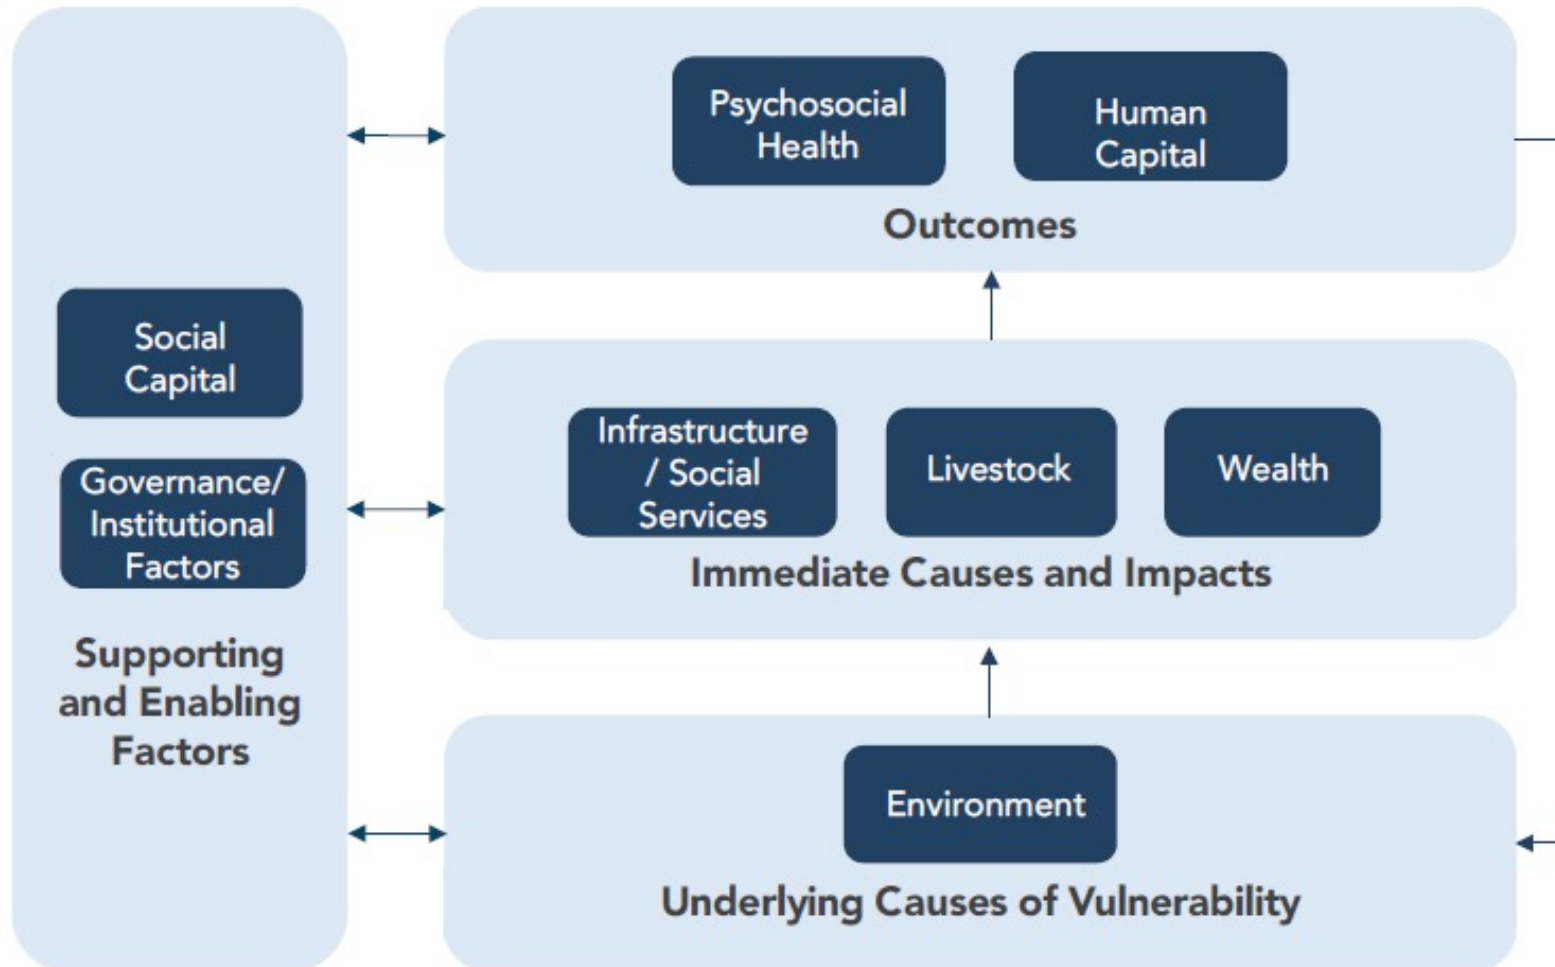

Example of findings: How an evidence-based framework can help identify leverage points in a livelihoods resilience system

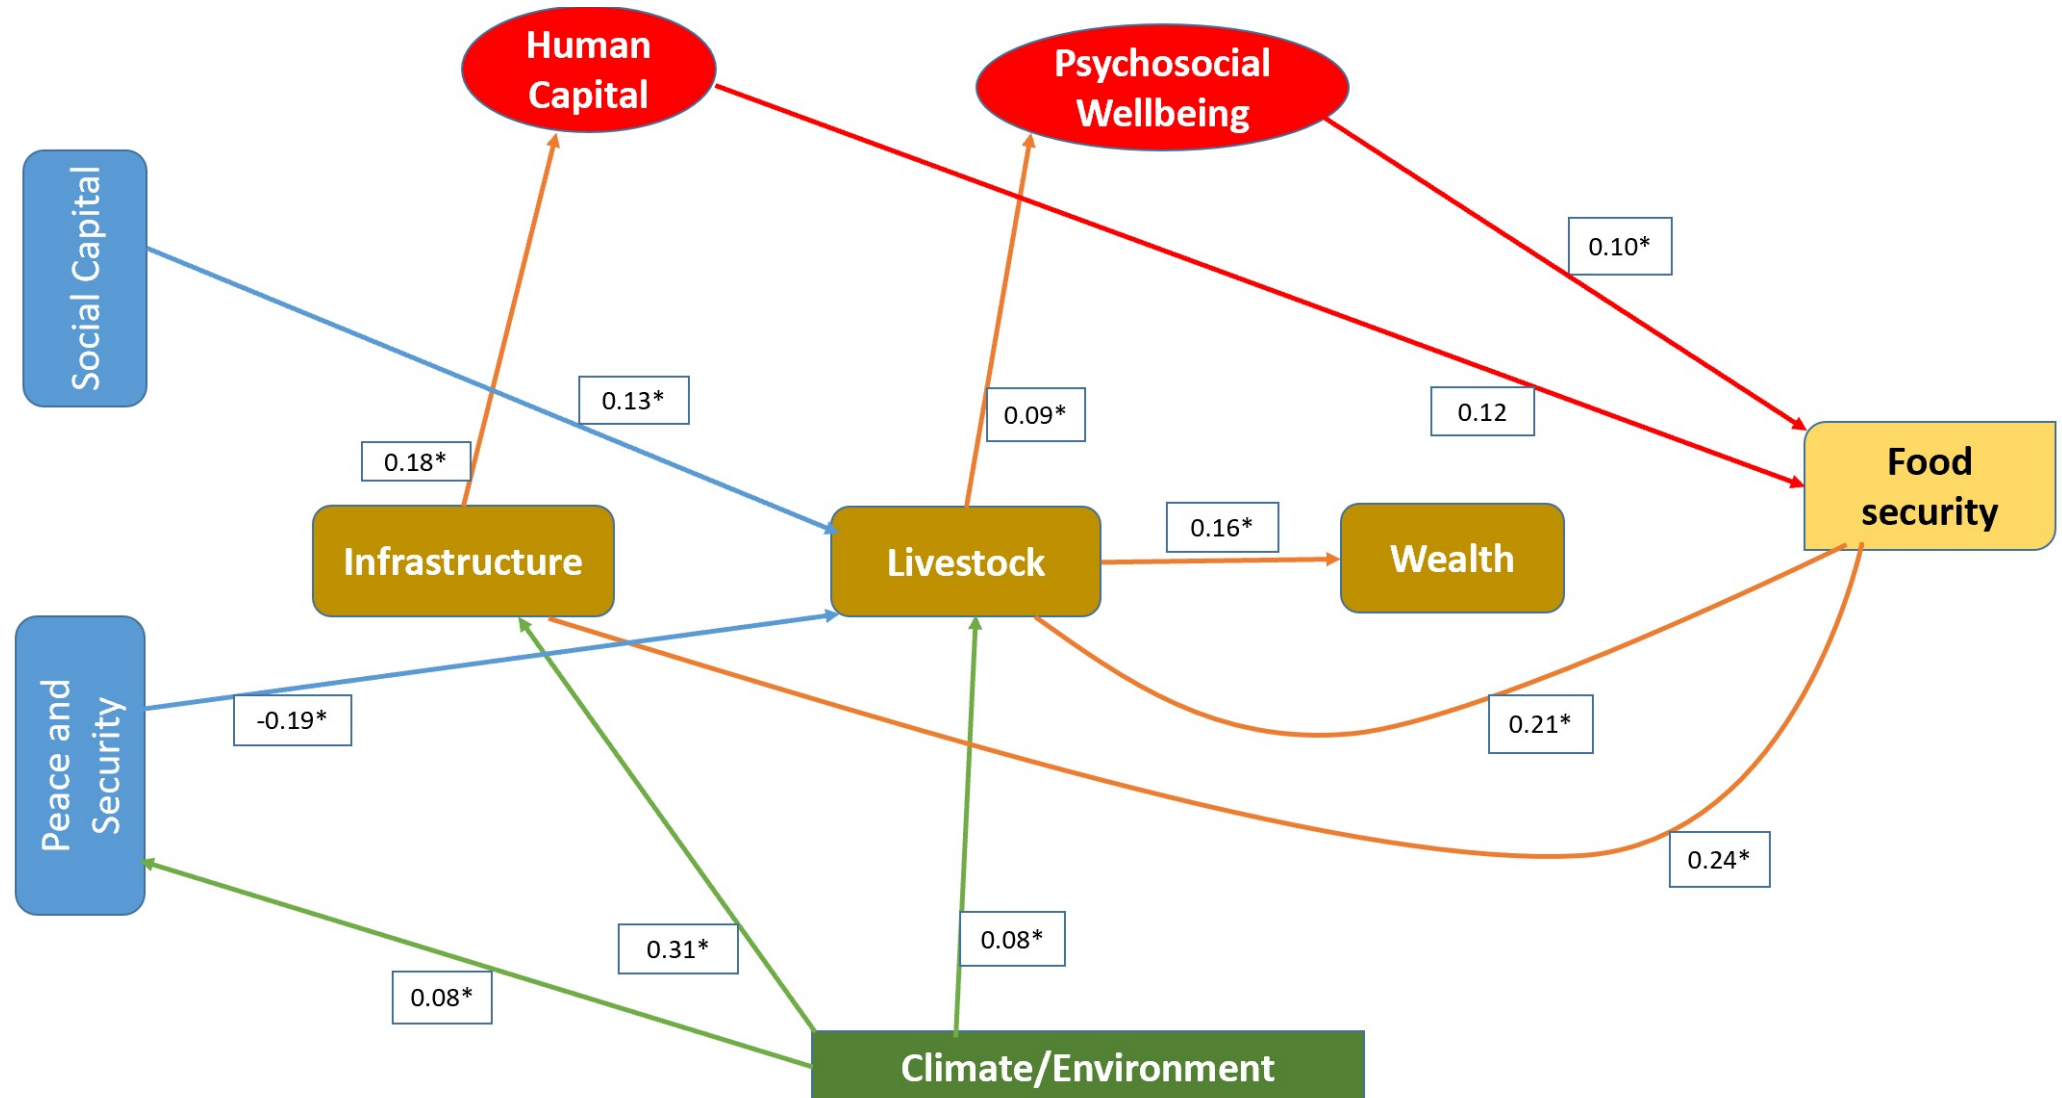

Case study: Borana
Pastoralist community
in Horn of Africa

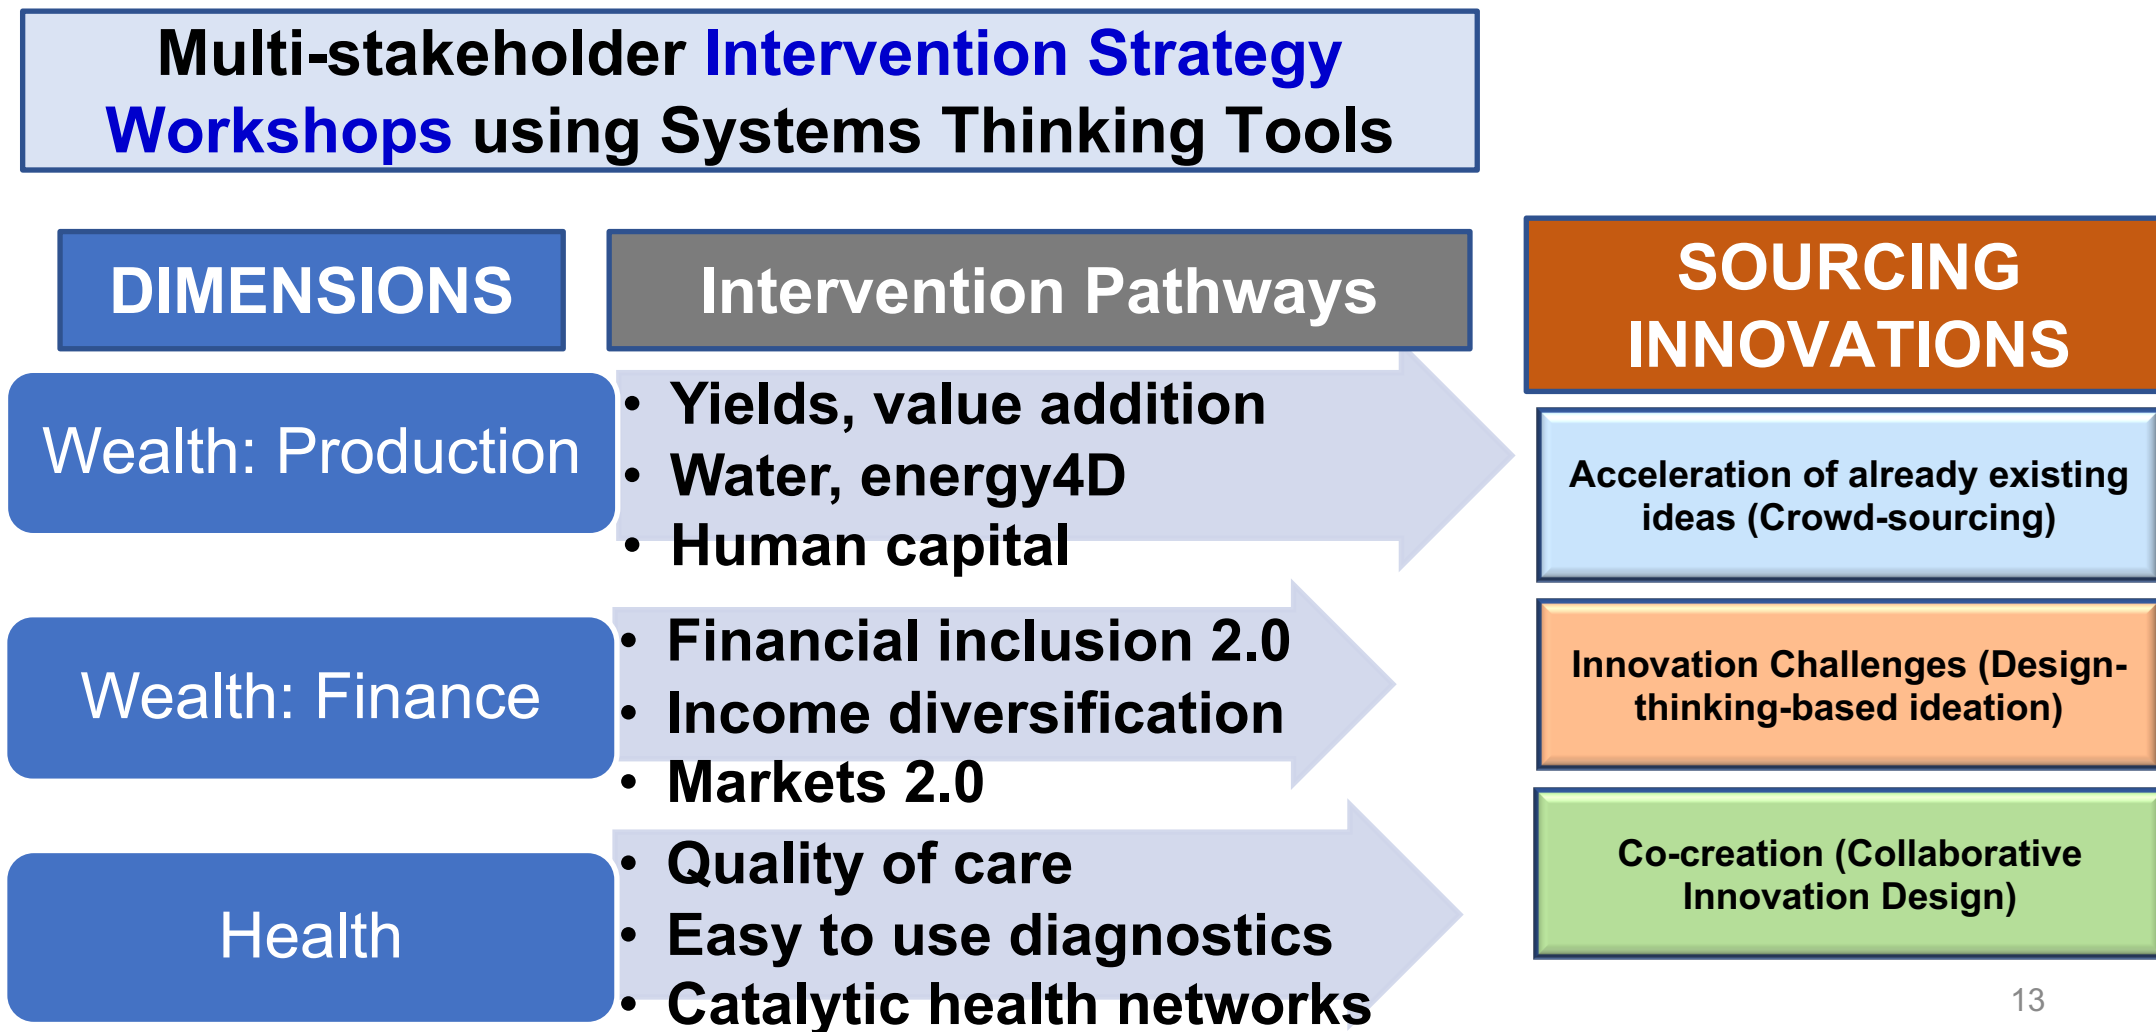

Initial Qualitative resilience dimensions identified for Borana Region Ethiopia

Final Quantitative structural model on drivers of resilience in Borana

Step 5: Translating resilience findings into intervention pathways and innovations

Step 6: Solutions tested in communities

'Push and Pull' pest control technique

The Winnowing Thresher

Nubrix: Bricks from Waste

The Solar Produce Dryer

- Over **400** innovators supported (*Seed-grants, idea development, mentorship, incubation, training, community testing etc*)
- **448,617** community beneficiaries involved in testing of solutions
- **56** successful start-up companies created

Many more examples.....

Pathway	Solution	Description of innovation
Tech4dev	RootIO	Content agnostic, community-led portable radio-broadcast system
Scaling agriculture	Low cost Solar Irrigation	Cheap irrigation pump to increase off season yields
	Improved push and pull	Inter-cropping of a 'nuisance' legume (<i>Desmodium Spp.</i>) with Napier grass triples maize yields
	m-Omulimisa	Phone App to enhance agricultural extension services
Value chains	Akorion	Scaling the 'farmer-agent model'
	Kungula	The Maize thresher that also winnows
	Low cost solar dryer	Rapid produce preservation using a low cost solar dryer
Scaled health outcomes	EpiTent	Humane Tent for Emergency Epidemic Response operations in hot humid climates
	Obulamu	Low cost ventilator for high dependency care
	Matibabu	Non-invasive POC malaria test that uses red light and the magnetism
	Weekebere	Personal foetal well-being monitor
	Increasing family planning	Using trained hair-dressers and tailors to spread messages on family planning
	BV Kit	Rapid Point of Care detection of Bacterial Vaginosis using a phone app and a vaginal sensor
	Arvanna	Mapping of emergency service providers
	E-Health for Refugees	Timely RH messaging for refugees in Rwanda
Education	'MEMA' (Local acronym)	Empowering mothers to prevent drop-outs in Mayuge (Co-created by the community)
	'GEKAT' (Local acronym)	Peer-to-peer Support enrolment and retention in schools
Markets 2.0	Village Egg Bank	One-by-one bulking of subsistence eggs as a currency for leverage in the markets
Diversification	Nubrix	Expand a tested model for brick making using waste paper
WatSan for health	Pedal tap	Retrofittable no-touch foot-operated sanitation tap

Step 7: Policy engagement

- Stakeholder engagement activities were undertaken in the different countries to co-create the research, disseminate learnings, and follow-up recommendations
- Example: RAN's Deliberative Polling research directly influenced the approach to high-risk settlements in landslide prone districts in Eastern Uganda

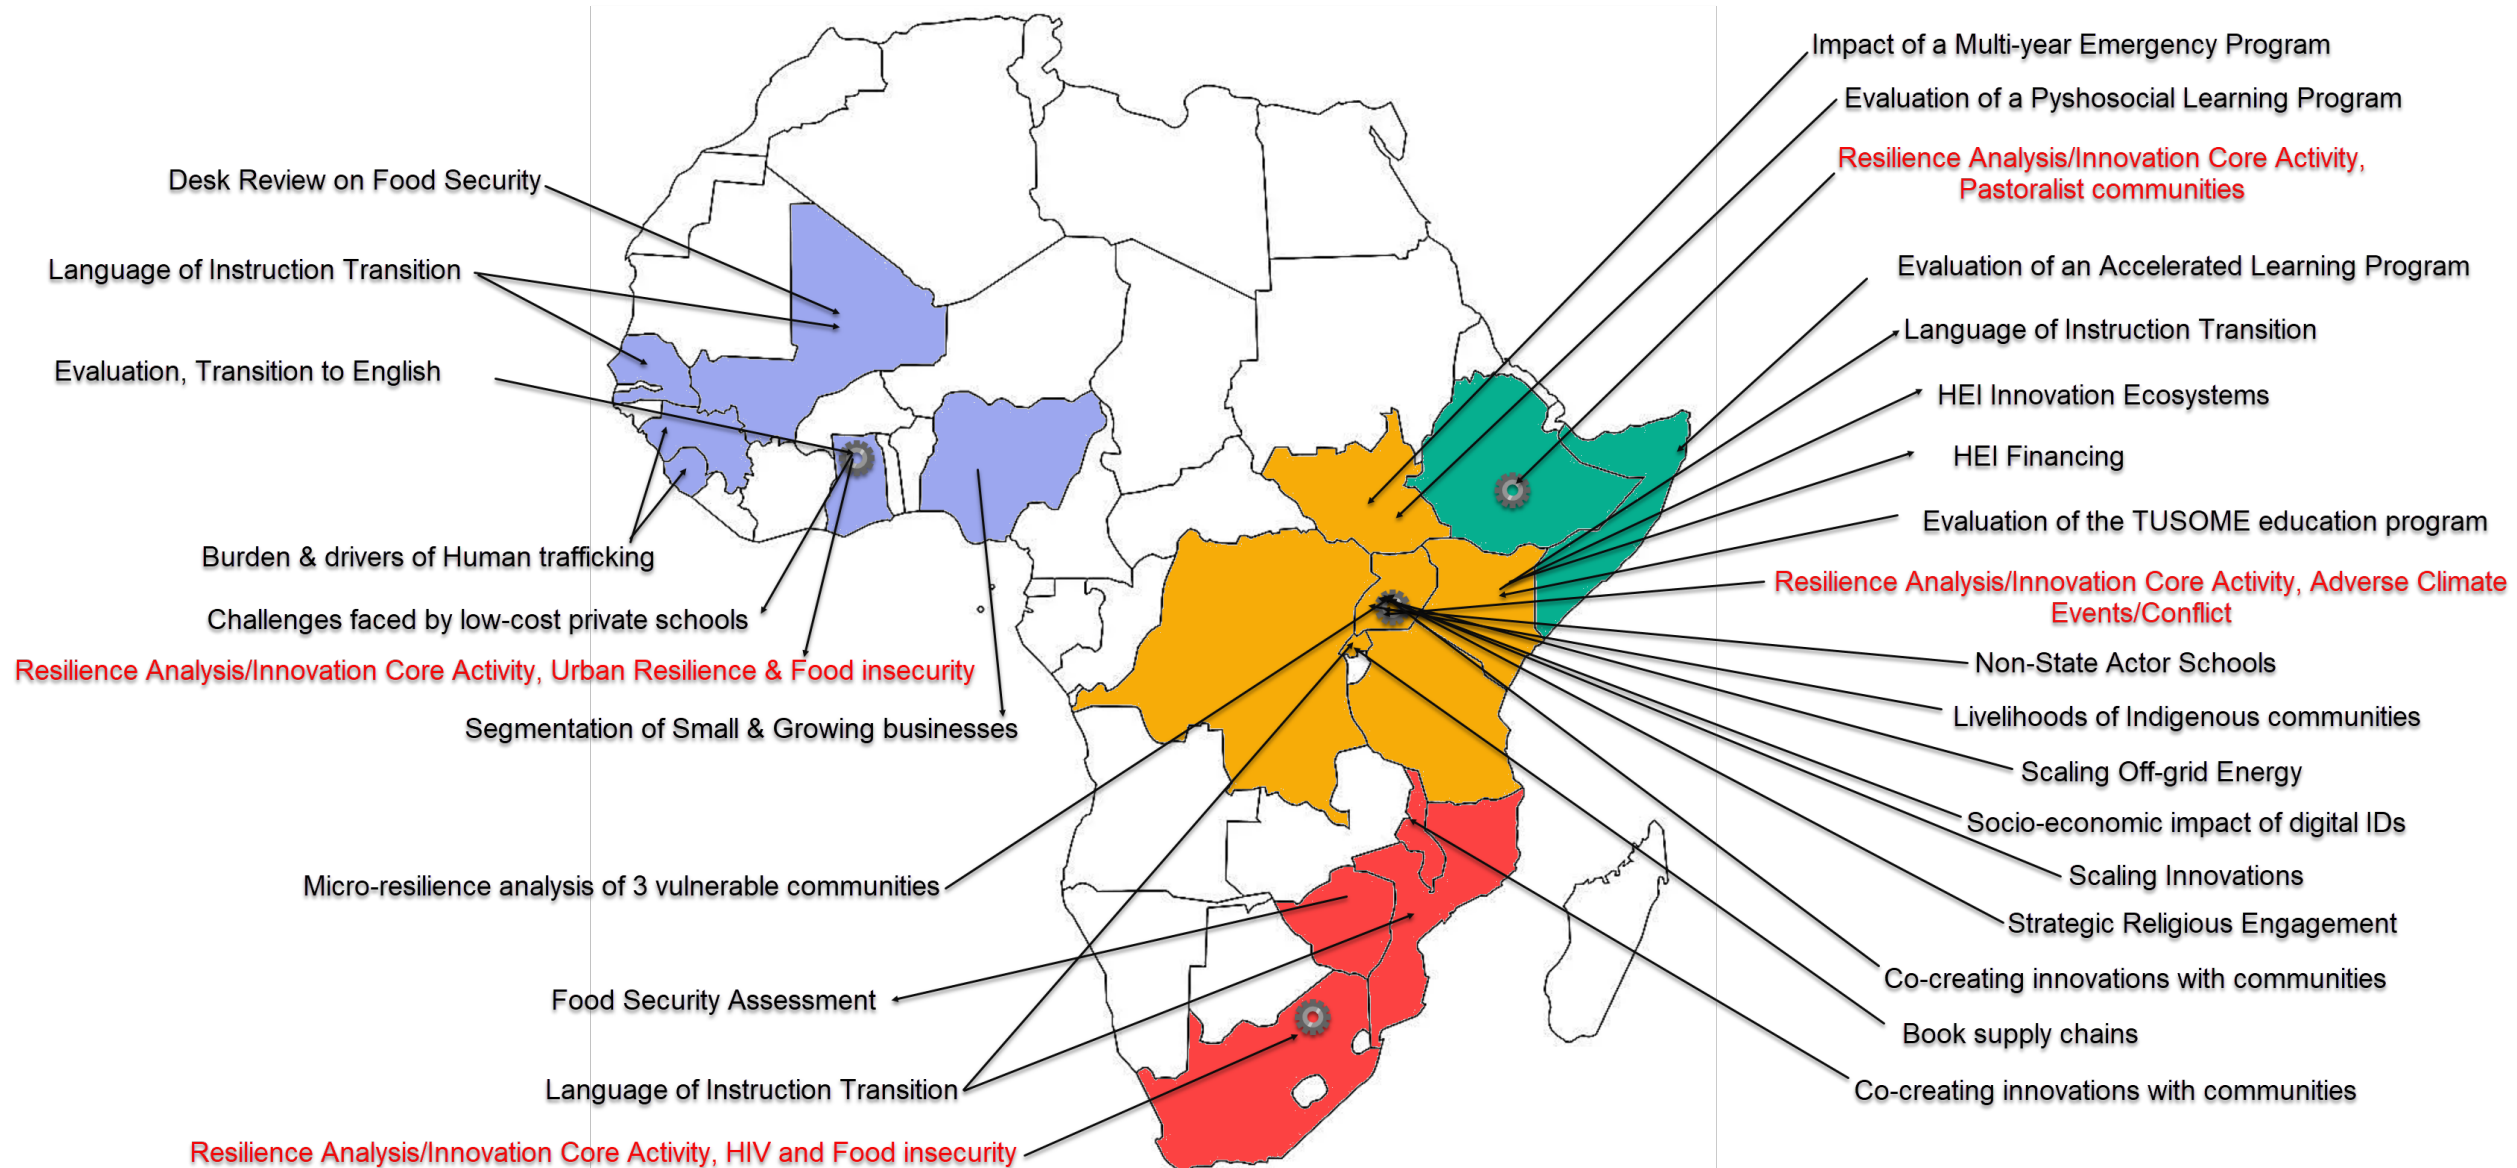

Woman speaking at a Deliberative Poll on Climate Risk, Butalejja, Uganda

Diversifying RAN's core research agenda

- Following the Africa-wide resilience analyses, RAN diversified its research agenda to address a broad range of development issues, using local researchers
- This arose as:
 - RAN became part of other Dev. Research networks, expanding its partner base (LASER/RTAC/SHARE)
 - Different development agencies started to buy into RAN's approach

- **Value proposition:** RAN can link development actors to local researchers **anywhere in SS Africa** to facilitate co-design of research, manage local research, bridge capacity gaps, and deploy innovative tools already developed by RAN (**e.g. systems research and resilience-lensing tools**)

- Resilience analysis methodology
- Systems thinking tools
- Human-centered design
- Innovation Co-creation tools
- Community-engagement strategies

Refugee camps, Northern Uganda: *“Why there are so many idle youth in the trading centers?”*

Challenges of Engaging HEIs in Dev. Research/Innovations

- Working in silos
- Insufficient development research capacity (eg. Writing for development audiences)
- Weak Innovation ecosystems in HEIs
- Bureaucratic systems stifle timely flow of logistics
- Inadequate research/innovation translation/scaling capacity
- Prohibitive regulatory environment that does not understand the innovation process
